

**Kyotherm proudly announces that its 20 MW biodiesel generator in Northern Ireland has successfully passed all required tests and is now connected to the grid.**

Paris, December 6, 2024 – Kyotherm proudly announces that its 20 MW biodiesel generator in Northern Ireland has successfully passed all required tests and is now connected to the grid. The project was entirely financed by Kyotherm, while CoolPlanet oversaw construction.

This generator represents the largest independent power plant to come online in Northern Ireland in the past 15 years. It will provide critical support to the grid by offering additional capacity, thereby enhancing energy resilience. The bio-generator aligns with the grid operator's strategy to increase the share of renewable energy in the Irish energy market.

Construction was managed by the CoolPlanet Group, which will also handle the operation and maintenance of the asset throughout its lifecycle. Additionally, PowerHouse, a CoolPlanet Group affiliate, will serve as the aggregator for this project.

Kyotherm's third-party financing underscores its commitment to driving the energy transition and industrial decarbonization across Europe. This project is part of a portfolio comprising 60 initiatives spanning nearly 170 sites in 12 countries worldwide. The commissioning of the Northern Ireland biodiesel generator marks a significant milestone, boosting the Group's operational capacity and further solidifying its role as a leader in sustainable energy solutions.

### **About CoolPlanet Group**

CoolPlanet is a global leader in industrial decarbonisation. Through a combination of technology and world-leading engineering expertise CoolPlanet enables complex organisations to reach Net Zero faster, at scale. For over 15 years, the company has been decarbonising large industrial, manufacturing and real estate organisations, helping them to take real and tangible actions to reduce their emissions. Operating in 17 countries, CoolPlanet has a global team of decarbonisation experts on a mission to bring the world closer to solving climate change.
